## Research Experience

- PhD Proj. 1 Studied **weak gravitational lensing of the CMB by galaxy clusters** in small angular scales. Developing simulations of a CMB flat sky patch lensed by galaxy clusters. Have built a sophisticated **Maximum-a-Posteriori (MAP)** estimator to estimate cluster mass for CMB S4-like experiments. I am building upon the clusterlens part of python module [Lenslt](#) by Julien Carron.
- PhD Proj. 2 Studied signatures of **statistical isotropy violation of the CMB due to the motion of our observation frame**. In a Bayesian approach, we have estimated the velocity of our local motion with a high significance using **Hamiltonian Monte-Carlo (HMC)** technique.
- M.Sc. Worked on data analysis of high-energy cosmic ray air-shower data using Machine Learning (ML) and Deep Learning (DL) techniques. Developed a Monte-Carlo pipeline to simulate air-showers for different primaries.
